

Summit OG, LLC

Delivering Experience, Performance and Success!

Summit Lean Design

Planning for a new project, whether Design/Build or reconfiguring a prior design, is paramount to the success of the project. At Summit Lean Design, LLC, we begin your project with an assessment of your strategic goals and encompassing industry, regulatory and site reviews to develop a customized approach our clients can be assured will serve them immediately, during the engagement and in the future.

Our consultants work with you, your staff and team of architects, vendor partners and construction counterparts to build realistic project plans and financial forecasts to ensure your project is on time and within budget.

We utilize:

- “Just in time” Lean Six Sigma methodologies
- Formulas and analyses to calculate current capacity and implement optimal capacity
- Vendor integration support with regard to identification, selection and partnerships to meet your requirements and technological enhancements
- Future state solutions that “pull” from your product offerings to serve your customers with the right products at the right time.
- Training for your teams to develop delivery that you can utilize both in the current design, to provide immediate value, and in the future to provide sustainable efficiency.

Process Improvement Solutions

Summit OG, LLC and Summit Lean Design, LLC are now utilizing SimCad software to identify current, problematic workflow and resource constraints then mathematically and systematically “pilot” changes to your design ****prior to implementation**** that are transparent and visual, optimized and provide you immediate value. We are utilizing this technology in hospital emergency rooms, inpatient and clinic design. Our process includes source system integration to electronically update design on a real time basis so your staff can “see” problems before they occur.
